

Patent Law Essentials

What Scientists, Engineers & Entrepreneurs Need to Know

Patent protection for inventions is a valuable component of business strategy for startups and established companies. This workshop covers the basics of U.S. patent law, including the patent application process, prosecution, litigation, and licensing. Undergraduates, graduate students, and post-docs in science, engineering, business, and law are welcome. We will discuss what recent developments in patent law mean for inventors, and draw examples ranging from the computer software to the pharmaceutical industries.

This lecture will be telecast live to NYU Tandon campus, Harvard University, Massachusetts Institute of Technology, Stanford University, University of California, Berkeley, and University of Illinois at Urbana-Champaign.

Instructors

Ryan (Hyunjong) Jin, Ph.D. (JD '18)

Julian G. Pymeto (JD '17)
