

The Augmented Lawyer: AI and the Future of Legal Practice

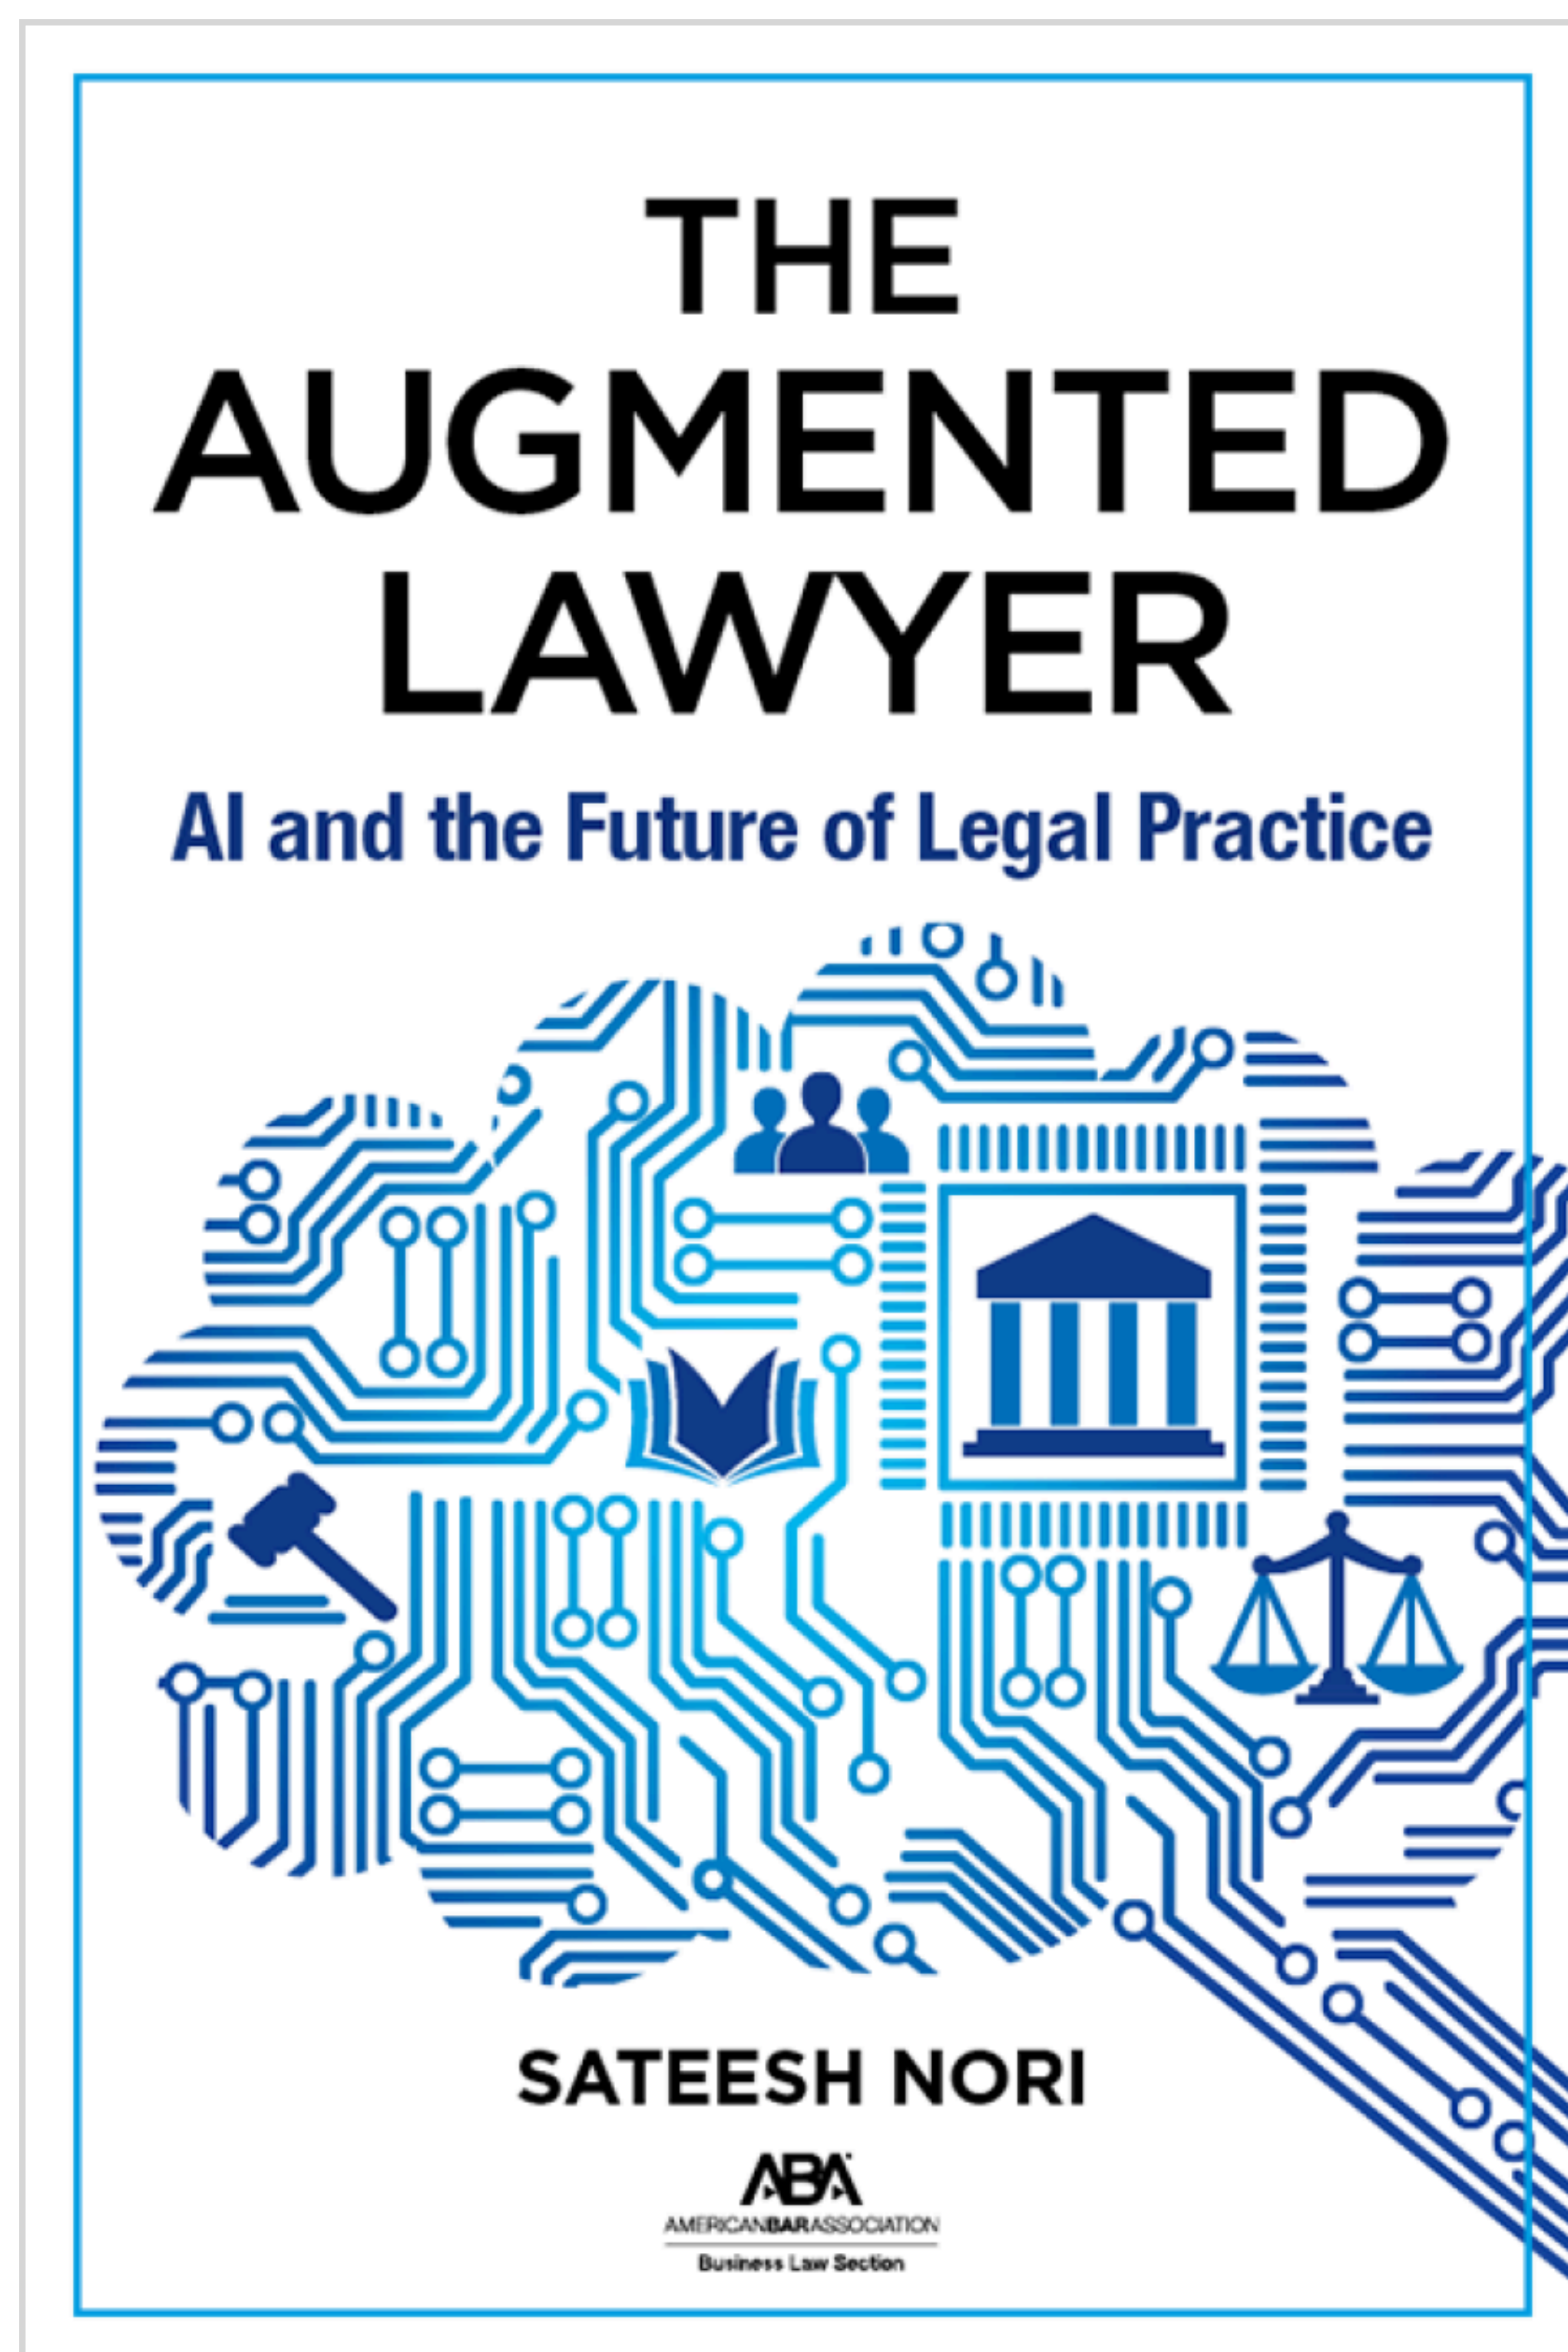

This book explores how lawyers can build the future in a world of technology and artificial intelligence. The barriers that have prevented legal innovation are examined and the opportunities that exist to transform legal services in this ever-changing world are explored. This book is not just about technology; it is about leveraging technology, data, automation, and new models of legal service.

What if lawyers could do more – not by working longer hours, but by working differently? What if they could use technology – not as a crutch, but as a force multiplier? What if they could redesign the way legal services are delivered so that they truly scale to meet the demand for justice? *The Augmented Lawyer* embraces these questions and challenges lawyers to rethink how legal work is done – leveraging technology, data, automation, and new models of legal services delivery to amplify the impact of lawyers.

This book explores how lawyers can build the future in a world of technology and artificial intelligence. The barriers that have prevented legal innovation are examined and the opportunities that exist to transform legal services in this ever-changing world are explored.

The book is a practical, thoughtful orientation for lawyers seeking to navigate the uncertain terrain ahead. Rather than offering a single vision of what lawyering will become, it offers a set of tools, concepts, and provocations that can help practitioners engage with this future critically, creatively, and ethically.
